The Big Willy Solution

Big Willy solves a number of problems in driving long threaded rods & bolts:

Big Willy has 9/16", 1/2" and 7/16" sockets in lengths from 3" to 36" (depending on the socket size) to drive nuts, bolts, Redi-rod, and hardware.

Big Willy is a one piece tool so the parts cannot be separated and lost.

Big Willy has a collet drive chuck for impactor tools.

This drive shank also fits all common conventional drill chucks.

Big Willy can also be driven without a power drill via a variety of hand operated collet drive tools.

Big Willy is the original power socket for cordless drills, the only power driven socket with a hollow shank, and the longest / deepest power driven socket made.

NOTE: For high speed, not high torque. DO NOT EXCEED 50ft-lbs / 600 in-lbs / 68 Nm
